TYNE FLOW is a leading British manufacturing company established in the northern industrial region of Birmingham to meet the growing demand for quality valves and couplers in the UK construction industry.

Tyne Flow emphasis on quality, reliability and service ability. Tyne Flow brand is the main choice for contractors who consider engineered solutions for fluid network control and fire protection systems. As an experienced pioneer in the UK construction market Tyne has designed and developed products to meet the highest expectations of its customers, both domestic and internationally.

Tyne is committed to continually raise the benchmark for innovative design and quality through international accreditations under ISO 9001, ISO 14001 for manufacturing and UL & FM recognition for fire product compliance. Our extensive range of valves and couplers strictly comply with European and American standards.

Tyne Flow has a dedicated technical and distribution network to meet local sales and stock requirements for our customers throughout the region we serve.
